Model PX-60

This is our largest sign suitable for indoor or outdoor applications **when protected from rain, snow, dust, etc.** It has 6" high characters and a length of either 64 or 87 inches. These signs are available in super-bright red or super-bright red/ green suitable for outdoor viewing from about 25 to 400 feet. Constructed with a black metal case and come with mounting brackets. They are easy to program with a remote keyboard or PC. They operate from a separate power pack using 115 VAC 60 cycle power, but 230 VAC 50 cycle units are available. These signs are available only on special order. For pricing information, see the [specifications page](#).

Available Options

Available on special order is a software program for programming the signs on a PC via the RS-232 serial port. Most sign functions can be programmed on the PC and transmitted to the sign. Messages can be stored on the PC and edited as needed. A 25 foot cable is provided with the software, and additional cables up to 75 feet can be ordered. When longer cabling is needed a RS-422 or RS-485 configuration is needed. The appropriate cabling, connectors, and converter units are available.

Silent Messenger System

This is a unique public address or paging system utilizing a PC server and up to 34 electronic moving message signs. Centralized control of all signs permit flexible control of all message content, presentation, color, and allows instantaneous up-dates of messages. Additional sign can be accommodated with additional PC nodes. All Phoenix standard sign models are supported. This system can be operated on an existing network. Contact us for further information.
